Molecular mechanics can be used to supply the potential energy for molecular dynamics computations on large molecules. However, they are not appropriate (nor are most ab initio methods!) for bond-breaking reactions.

The Merck force field (Ref. [18]) often gives geometries that are satisfactory for energy calculations (i.e. for single-point energies) with quantum mechanical methods; this could be very useful for large molecules: W. J. Hehre, J. Yu, P. E. Klunzinger, "A Guide to Molecular Mechanics and Molecular Orbital calculations in Spartan," Wavefunction Inc., Irvine CA, 1997, chapter 4.

Ab initio quantum chemistry Ab initio means "from the beginning" or "from first principles". Ab initio quantum chemistry distinguishes itself from other computational methods in that it is based solely on established laws of nature: quantum mechanics Over the last two decades powerful molecular modelling

Computational chemistry Computational Chemistry is the modeling of chemical phenomenon using computers rather than chemicals. The models used vary in their sophistication: Cheminformatics Molecular mechanics Semi-empirical methods Ab initio quantum chemistry All these methods, except the last, rely on empirical information (parameters, energy levels etc.).
